SUMMARY

Software Engineering student and aspiring UX/UI Designer with practical experience in designing enterprise workflows, government administrative systems, and digital platforms. Passionate about translating complex requirements into intuitive, user-centered digital solutions. Skilled in user research, wireframing, interactive prototyping, and scalable design systems using Figma.

Skills

- UX Design: User Research & Persona Creation, Information Architecture, Wireframing & Prototyping, Usability Testing, User Journey Mapping.
- UI Design: Visual Design, Design Systems, Component Variants & Tokens, Auto Layout, Typography & Iconography, Responsive Design.
- Tools & Technologies: Figma, Agile/Scrum Workflow.

Education

2020 – 2022

Engineering and Applied Science Program

Chiang Rai Municipality School 6

2023 – present

Software Engineering

University of Phayao

EXPERIENCE & KEY PROJECTS

UI - กรมทะเบียนตรา (2026)

- Role & Contribution: Designed government administrative interface systems on Figma, focusing on personnel evaluation systems, examination creation interfaces, and civil service career path navigation.
- Key Tasks: Created and refined UI mockups and component structures based on operational specifications; designed intuitive workflows for personnel evaluation and exam management modules.

STARTBOX X MANAWORK Platform (2025 – 2026)

- Role & Contribution: Collaborated on UI/UX design for enterprise document management, approval workflows, and task tracking platforms (MANAWORK).
- Key Tasks: Designed reusable interface components, document approval flow layouts, and status tracking cards to maximize administrative efficiency.

GreenConnect (2026)

- Role & Contribution: Developed system workflow diagrams and comprehensive UI layouts for a modern management and tracking platform.
- Key Tasks: Structured core user flow diagrams and screen layouts to streamline multi-user interactions and ensure seamless end-to-end user journeys.

IT Equipment Sales App (2022)

- Role & Contribution: Designed an aggregated marketplace application for browsing and shopping diverse technology-related hardware and items.
- Key Tasks: Created structured wireframes for product categories and product detail pages, emphasizing clear layout hierarchy; built interactive prototypes to demonstrate core e-commerce interactions.
